

Habitat destruction

Define biodiversity.

Habitat destruction

Three reasons for habitat destruction?

Habitat destruction

How can humans harm habitats through food webs?

Habitat destruction

Five undesirable effects of deforestation?

Habitat destruction

Why does deforestation cause soil loss?

Housing, crop and livestock production;
extraction of natural resources; freshwater
and marine pollution.

The number of different species that live in
an area.

Reduced biodiversity, extinction, loss of
soil, flooding, increase of carbon dioxide in
the atmosphere.

By removing or adding species, which alters
food chains and food webs and affects
other organisms.

Without tree roots to hold it, soil is washed
away by rain.
